## DETAILED ACTION

### *Allowable Subject Matter*

1. **Claims 1-21** are allowed.
2. The following is an examiner's statement of reasons for allowance:

**With respect to claims 1, 8, and 15**, the closest prior art, Chandrashekhkar (US 2003/0140131) teaches to the field of communications systems, more particularly, relates to a system and method for dynamic management of Internet Protocol (IP) Virtual Private Networks, and Virtanen (US 6,879,834) teaches a method of limiting the quality of service of data transmission in a wireless telecommunications system, in which the quality of service of data transmission is defined by means of quality of service parameters, alone or in combination, the limitations of claims 1, 8, and 15 as set forth above.

But Chandrashekhkar and Virtanen fail to anticipate or render obvious, alone or in combination, the features of determining quality-of-service parameters according to the quality-of-service profile and the first application information, the quality-of-service parameters used to process communication to the mobile station during the packet data call, wherein the quality-of-service parameters are changeable during the packet data call upon receipt of information corresponding to a second application of the mobile station, as set forth in claims 1, 8, and 15.

Dependent Claims 2-7, 9-14, and 16-21 are allowable for the same reason as set forth above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Immonen (US 7,006,472) teaches a mechanism is provided for supporting differentiated services (quality of service) in a radio network. A radio access system is provided which supports the quality of service in data packet transmission over its air interface.

Borella (US 6,940,836) teaches method and apparatus for indicating quality of service to a radio access network.

Smith (US 6,934,258) teaches a Quality of service based transitioning between alternate transport paths.

Adamczyk (US 7,573,906) teaches a methods, computer program products, and systems for managing quality of service in a communication network for applications.

Lamarque (US 6,690,651) teaches a method and apparatus for automatic transfer of a call in a communications system in response to changes in quality of service.

Besset-Bathias (US 7,024,202) teaches a method of processing UMTS calls in a packet transmission network and node for the UMTS network and for implementing said method.

Havens (US 6,735,175) teaches changing quality of service for voice over IP calls.

Lee (US 2005/0055220) teaches method for providing service based on service quality and an accounting method in a mobile communication system.

Jin (US 7,408,940) teaches use of precedence bits for quality of service.

Cheng (US 7,336,632) teaches apparatus and associated method for selecting quality of service related information in a radio communication system.
